

CORROSION GRENADE™

["PULL THE PIN" ON CORROSION™]

Introducing the world's first clamp-on corrosion inhibitor for air conditioning systems.

For years, air conditioning manufacturers have been plagued with the expensive problem of metal part corrosion failure. Dealers have also paid a price, because warranty service isn't very affordable.

That's history. Now dealers can just fasten a new CORROSION GRENADE™ unit to the suction line of any air conditioner to dramatically slow corrosion of all nearby metal parts. It protects continuously, even in hostile salt air conditions. Works like magic, but it's science.

The CORROSION GRENADE™ unit protects metal parts by acting as a "sacrificial anode." It corrodes instead of expensive A/C parts like aluminum fins, copper piping, and galvanized steel.
